

Flame Test Chamber UL94

Description

- The series of horizontal-vertical flame test apparatus are designed and manufactured according to the standard and related requirement of UL94 , IEC60695-11-2 , IEC60695-11-3 , IEC60695-11-4 , IEC60695-11-20
- It simulates the influence of early-stage flame when there is a fire around the electric and electronic products, so that to judge the igniting danger degree
- It is mainly used in plastic and other non-metallic material sample, solid material
- It is also applicable in the Horizontal, vertical flammability test of the relative combustion characteristic of foam plastics whose density is no-less than 250kg/m according to ISO845 test method.
