

## Leak tightness Tester of Seats and Packing for Valves According to EN12201-4 Annex A-25bar-Air

### Description

- Including the function of air pressure testing //
- Air pressure up to 1 bar for low-pressure line with ramp control //
- Pressure increase rate control for both water and air pressure control (as per standard, it is important to raise the pressure in 30s) //
- PLC controlled //
- Includes computer and software for monitoring and controlling //
- Graphing and saving of data for pressure //
- Software is Windows-based //
- Air inlet pressure 8 bar //
- Machine includes low pressure side and high pressure side //
- Low pressure range is 0-1 bar //
- High pressure range is 0-25 bar //
- Servo valves for pressure control is Japan made //
- Both high and low pressure side has function of pressure increase ramp control //
- Online remote software support 7/24 //
- A training video is included
