

# Welding Strength Tester for UPVC Profiles

## Description

AHP PLASTIK MAKINA

It is used to detect the breaking strength of the corner welding part of PVC-U plastic materials for doors and windows, to test the mechanical properties of the unplasticized polyvinyl chloride (PVC-U) materials used for doors and windows, do the breaking strength test of the corners of doors and windows, and detect the failure load and bending stress of the test pieces.

This model includes required test fixtures that is mounted on the standard tensile tester. It gives you possibility of having tensile tester and welding tester of UPVC profiles at the same time.
